

# DYROS 100

**1/2" hose connector with 11 mm passage capacity for water, air and oil**

Dyros 100 is the most popular hose connector in the market. Thousands of connectors are used every day

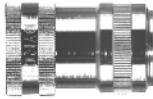

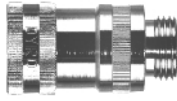

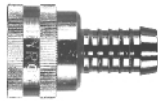

- in plumbing installations
- on plastic moulds
- on high pressure cleaners
- on laundry and washing machines
- on hoses in industry and household.

The connectors are manufactured from solid brass and chromium plated.

Stainless steel is used for locking balls and springs. O-ring seals are made of Nitril rubber (70NBR/99018) - especially resistant to water and will withstand temperatures from -30° til +100°C.

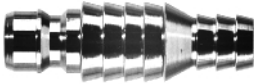

The nipples are held in the connector by three balls serving as a ball bearing which prevents the hose from kinking.

The extensive Dyros 100 selection handles any situation and as soon as new applications are found, the system is adjusted and - if necessary - extended.

Connector with internal thread	BSP 1/2"	BSP 3/4"	Universal*	
	Art.No. 111	Art.No. 113	Art.No. 113G	*) fits M 22x1, BSP 1/2" and BSP 3/4"
<b>Connector with external thread</b>	Art.No. 121	Art.No. 123
